

IN THE CLAIMS:

Please cancel Claims 9 to 12, 14, and 16 without prejudice or disclaimer of subject matter. Please amend Claims 1 to 8, 13, 15, 17, and 18 and add new Claims 19 to 24 as follows. The claims, as pending in the subject application, read as follows:

1. (Currently Amended) A computer implemented method for ~~creating a networked document~~ processing a Web document for storage on a Web document server, the method comprising the steps of:

reading a control sheet which includes at least one command;

reading a content sheet which includes content to be added to or modified on the Web document;

determining whether to create a new Web document or to modify an existing Web document based on the commands on the control sheet;

~~generating~~ creating or modifying the Web document in accordance with the commands on the control sheet and the content on the content sheet; and

storing the created or modified Web document on the Web document server to the network.

2. (Currently Amended) The method according to ~~of~~ Claim 1, wherein the control sheet is a print page.

3. (Currently Amended) The method according to ~~of~~ Claim 1, wherein the content sheet is a print page.

4. (Currently Amended) The method according to ~~of~~ Claim 1, wherein the control sheet ~~identifies content in the control sheet to add to the document~~ includes the command to create the Web document with the content positioned in a particular location on the Web document, and wherein the content is included on the content sheet.

5. (Currently Amended) The method according to ~~of~~ Claim 1, wherein the control sheet ~~identifies~~ includes the command to identify on the content sheet a text Web site address as a hyperlink to be added at a specific location on the Web document ~~add to the document.~~

6. (Currently Amended) The method according to ~~of~~ Claim 1, wherein the control sheet is in digital form.

7. (Currently Amended) The method according to ~~of~~ Claim 1, wherein the content sheet is in digital form.

8. (Currently Amended) A computer implemented method for ~~modifying~~ processing a networked Web document for storage on a Web document server, the method comprising the steps of:

reading a control sheet, ~~wherein the control sheet~~ which includes ~~commands to modify the document~~ at least one command;

reading a content sheet, ~~wherein the content sheet~~ which includes
~~information to add or to remove from the document~~ content to be added to or modified on
the Web document;

~~retrieving the document;~~

determining whether to create a new Web document or to modify an
existing Web document based on the commands on the control sheet;

creating or modifying the Web document ~~using~~ in accordance with the
commands on the control sheet and the content on the content sheet; and

storing the created or modified Web document ~~to the network~~ on the Web
document server.

wherein the control sheet includes the command to create the Web
document with the content of the content sheet positioned in a particular location on the
Web document and the command to identify on the content sheet a text Web site address as
a hyperlink to be added at a specific location on the Web document.

9. to 12. (Canceled)

13. (Currently Amended) A document management system for ~~creating~~
~~processing~~ a Web document for storage on a Web document server in accordance with a
printed control sheet and a printed content sheet, the document management system
comprising:

~~a printed control sheet;~~

~~a printed content sheet;~~

a document processor for ~~reading a~~ recognizing at least one command
~~printed on included on the printed~~ control sheet, thereby to generate a document that
~~includes content on the content sheet~~ for recognizing content included on the content sheet,
for determining whether to create a new document or modify an existing document based
on the commands on the control sheet, for creating or modifying the Web document in
accordance with the recognized commands ~~printed on the control sheet~~ and the recognized
content, and for storing the created or modified Web document ~~in a network on the Web~~
document server.

14. (Cancelled)

15. (Currently Amended) A document management system for ~~modifying~~
processing a Web document for storage on a Web document server in accordance with a
printed control sheet and a printed content sheet, the document management system
comprising:

~~a printed control sheet;~~

~~a printed content sheet;~~

a document processor for ~~reading a~~ recognizing at least one command
~~printed on included on the printed~~ control sheet, thereby to retrieve a document stored on a
network for recognizing content included on the content sheet, to modify for determining
whether to create a new document or modify an existing document based on the commands
on the control sheet, for creating or modifying the Web document in accordance with a the
recognized commands ~~printed on the control sheet~~ and the recognized content ~~printed on~~

~~the content sheet, and to store~~ for storing the created or modified Web document in on the network Web document server,

wherein the control sheet includes the command to create the Web document with the content of the content sheet positioned in a particular location on the Web document and the command to identify on the content sheet a text Web site address as a hyperlink to be added at a specific location on the Web document.

16. (Cancelled)

17. (Currently Amended) A computer-readable medium ~~that creates a networked document~~ storing a computer executable procedure for processing a Web document for storage on a Web document server, the computer-readable medium the procedure comprising the steps of:

~~computer-readable commands~~ reading a control sheet which includes at least one command;

~~computer-readable content~~ reading a content sheet which includes content to be added to or modified on the Web document; and

determining whether to create a new Web document or to modify an existing Web document based on the commands on the control sheet;

~~a code segment for creating the document in accordance with the commands and the content~~ creating or modifying the Web document in accordance with the commands on the control sheet and the content on the content sheet; and

storing the created or modified Web document on the Web document server.

18. (Currently Amended) A computer-readable medium ~~that modifies a networked document~~ storing a computer executable procedure for processing a Web document for storage on a Web document server, the computer-readable medium the procedure comprising the steps of:

~~computer-readable commands~~ reading a control sheet which includes at least one command;

~~computer-readable content~~ reading a content sheet which includes content to be added to or modified on the Web document;

determining whether the Web document is to be created or modified based on te commands on the control sheet;

~~a code segment for identifying the document within a network~~ creating or modifying the Web document in accordance with the commands on the control sheet and the content on the content sheets; and

~~a code segment for modifying the document in accordance with the commands and the content~~

storing the created or modified Web document in the Web document server,

wherein the control sheet includes the command to create the Web document with the content of the content sheet positioned in a particular location on the Web document and the command to identify on the content sheet a text Web site address as a hyperlink to be added at a specific location on the Web document.

19. (New) The method according to Claim 1, wherein said determining step determines that an existing Web document is to be modified, further comprising the step of retrieving the existing Web document from the Web document server.

20. (New) The method according to Claim 8, wherein said determining step determines that an existing Web document is to be modified, further comprising the step of retrieving the existing Web document from the Web document server.

21. (New) The system according to Claim 14, wherein said determining module determines that an existing Web document is to be modified, the document processor further comprising a module for retrieving the existing Web document from the Web document server.

22. (New) The system according to Claim 16, wherein said determining module determines that an existing Web document is to be modified, the document processor further comprising a module for retrieving the existing Web document from the Web document server.

23. (New) The medium according to Claim 17, wherein said determining step determines that an existing Web document is to be modified, the procedure further comprising the step of retrieving the existing Web document from the Web document server.

24. (New) The medium according to Claim 18, wherein said determining step determines that an existing Web document is to be modified, the procedure further comprising the step of retrieving the existing Web document from the Web document server.
